# ATS— Adding a Modality Smartphone

## Adding a Modality:

You are able to enter a modality by going through the menu and accessing the modality option and Add Modality. Or by setting modalities as a default hot button and accessing that way. You can also choose to use bulk modalities, which allows you to assign multiple athletes modalities at one time.

Enter your athlete information, if you went through the athlete profile, that will be entered for you.

Select the injury you are adding modalities for and the date.

Select the modalities either from the drop down, one at a time, pick a protocol, or use the pick functions to select multiple rehabs at one time.
